EGR VALVES

EGR = Exhaust Gas Recirculation

Exhaust Gas Recirculation (EGR) is a nitrogen oxide (NOx) emissions reduction technique used in petrol and diesel engines. EGR works by recirculating a portion of an engine's exhaust gas back into the intake manifold in controlled amounts. The Exhaust Gas Recirculation valve is a component commonly found on many road going vehicles.

FAULTY EGR SYMPTOMS CAN INCLUDE:

- ▶▶ Poor performance.
- ▶▶ Decreased power and acceleration.
- ▶▶ Rough idle.
- ▶▶ Check engine light coming on.

Goss have a comprehensive range of EGR valves in stock demonstrating our commitment to continually expanding our range. All Goss products are subjected to a stringent validation process, are OES engineered and sourced from leading OEM manufacturers.

- ▶▶ **SOURCED FROM GLOBAL OE SUPPLIERS**
- ▶▶ **COMPREHENSIVE RANGE**
- ▶▶ **PRODUCT & TECHNICAL BACK UP**
